Find the text in the maze!

Today, most cars run on gasoline, which comes from oil. In twenty years, more and more cars will run on liquid petrol gas instead. LPG is less harmful to the environment. So from this point of view, traveling will be cleaner. Trains will probably run much faster than they do today. We will see many high power trains that will travel at speeds of 500 mph or more. We hope the future will be safer and cleaner, so that our children's children will live a happy, healthy and fruitful life.

1.	What	will cars use for fuel in the future?
2.	Will	this help the environment? And why?
3.	What	speed will trains travel at?
4.	What	do we hope?
