Find the text in the maze!

Products such as cars, rings, shirts and tables are made of many different materials like metal, gold, silver, plastic, cotton, wood and glass. Materials are very useful because we can bend, shape mould or cut them to the object that we desire. Materials can be found in various countries around the world. However, China is the biggest producer and exporter of products in the modern world. For this reason, other countries such as the U.K, Canada, America and Spain import things from China.
