Read the paragraph. Find the text and answer the questions.

There are many threatened or endangered animals around the world. This means that there are very few animals that can be found in the wild either because their habitat has been destroyed or they continue to be hunted and killed in large numbers. The tiger is a critically endangered species as well as the orangutan. This is because poachers hunt and kill them. Farming is also a main reason for loss of habitat due to deforestation.

1.	What does endangered mean?
2.	Why are orangutans endangered?
	Mhat in farming doing?
